## Steps to reproduce

---

When the `browser.notifications.create` API is called from the Adblock Plus extension, the entire Edge browser crashes. See related Adblock Plus issue <https://issues.adblockplus.org/ticket/7206>

## Steps to reproduce

1. Navigate to `about:flags` and ensure "Enable extension developer features" is checked.
2. Navigate to <https://www.microsoft.com/en-gb/p/adblock-plus/9nblggh4r9nz> and install Adblock Plus.
3. Ensure Adblock Plus is enabled in Edge.
4. Open "... Edge menu, Click "Extensions", hover over "Adblock Plus", click cog icon, click "Background page" button in "Inspect:" section.
5. Paste this code:

```
browser.notifications.create({
  type: "basic",
  iconUrl: "icons/abp-16.png",
  title: "crash test",
  message: "hello world"
});
```

## What happens

Edge crashes.

## What I expected

Edge doesn't crash, a notification is displayed.

## Environment

I'm running Edge 42.17134.1.0, Adblock Plus 0.9.11, Windows 10 (10.0.17134 Build 17134)
